To Cork or not to Cork?

For wine producers, as well as for the lovers of the beverage of Bacchus, the object put at the top of bottle's neck and sealing it, with the purpose of keeping intact its precious content until the moment it will be poured on a glass, seems to be still today a crucial matter. A critical matter, cause of endless polemics as well as endless prejudices. Of course, we are talking about cork, that small cylinder traditionally made of the homonymous material that with its presence reassures consumers about the quality of wine, as if it were more important than the content of the bottle. It's no use denying this: despite many years have passed since the introduction of alternative closures, there is still today a strong prejudice about their use. And not only from consumers: even producers seem to be sensible to this subject, most of the times for traditional and cultural matters, as well as of proud, instead of technical reasons.

There is one point in which we do agree on: cork closure certainly is more attracting and *romantic* than a cold cylinder made of synthetic material. Aesthetic and sentimental matters apart, we should also keep on mind cork closure however hides an insidious danger that - in a second - it is capable of destroying the magic of a moment: the annoying cork taint. This fault is produced by the *Armillaria mellea* fungus - a parasite of cork tree and in case it develops in a cork closure, it produces a chemical compound with the not reassuring name 2,4,6-trichloroanisole - TCA, in short - and responsible for the disgusting smell and taste. Industries involved in the production of cork closures try to limit the development of this fungus by adopting specific treatments, however its presence is hardly detectable and one realizes about its presence only when the "damage has been done" and it is then too late. A damage not to be taken lightly as the estimates of bottles damaged by cork taint is about 7%, with peaks of 15%.

For the sake of truth, it should be said each one has his or her own sensitivity to the perception of trichloroanisole - and this is true for any other aroma - therefore it is likely the fault perceived by one person is completely unnoticed by others. Moreover, it

should be said our olfactory system tends to get used to this smell in a relatively short time: at each smell in the glass the aroma will be less and less perceptible in function of the quantity present in the wine. Lesser the quantity, faster the sensation of its vanishing from the glass. Many solutions have been proposed to the problem, only few of them really working. All currently believe preventing *cork taint* is impossible. To tell the truth, the solutions have been proposed many years ago, but the appreciation of consumers and producers was not the best. The idea consists in simply replacing the cork closure with another one made of different material, not only of synthetic type.

Many years have passed since the introduction of synthetic closures as an alternative to cork closure, introduction which was welcomed, in particular from consumers, with a negative appreciation. Wines which used them were considered as lesser wines, products of lesser quality which did not deserve the honor of natural cork closure. For many consumers the view of a closure made from a material different than cork, immediately disqualified the wine. Indeed, the synthetic cylindrical closure, similar to the ones made of cork, were not the first ones to be used in wine bottles. The screw cap, for example, was used by wineries many years before, used for one or two liters bottles and destined to a mass consumption for wines of mediocre and low quality. Maybe it is the memory of those wines, which were not certainly appreciated for their quality - produced by wineries oriented to quantity production only - if the view of closures made of synthetic materials still today evokes in many consumers the idea of bad wine.

Not only synthetic closures, not only screw caps: in the past years have been proposed many alternative solutions to cork closures. From glass closures to synthetic closures with valves capable of allowing the passage of small quantity of air, today the possibilities of replacing the cork closure in bottles are really many. The analysis of the wine contained in bottles sealed with alterna-

tive closures, by means of tasting and reliable tests, have proven quality is not lesser than wines sealed with cork closures. Today many producers have made the choice of adopting the use of alternative closures even in their best and most celebrated products. The figures of some years ago suggested wines kept in bottles sealed with closures made from a material different than cork, had a "life" of about 18 months. After this period, the effects of the lack of exchange of oxygen would have inexorably brought the end of wine.

Eighteen months are however a sufficient time for keeping all those wines destined to immediate consumption, that is not destined to the aging in bottle. In this case the consumer will be certain that, at the opening of the bottle, will not find the annoying cork taint. Some producers who make use of alternative closures since many years, however say this period is longer than 18 months: many say that after many years these wines are still drinkable and well kept. Despite of that, it is however undeniable alternative closures are not well accepted by consumers, although their acceptability has strongly improved in the last few years. Maybe it was because of information, or even by the fact it is the quality of wine - either good or bad - to tell the truth and it is more convincing than any closure or label. Quality cork closures, the ones usually used for wines to be aged in bottle, have a pretty high cost, not always justified in wines destined to an immediate consumption. Cork closure is charming and romantic - still today irreplaceable in certain cases - however, I have no doubt about this, a good synthetic closure is always better than a bad quality agglomerated cork closure.

WINE TASTING

Comparing Sangiovese and Montepulciano

Among the most appreciated red berried grapes of Bel Paese, Sangiovese and Montepulciano are the varieties from which are being produced the main wines of central Italy

Sangiovese and Montepulciano are the main representative red berried grapes of central Italy. The two varieties are virtually present in every region of central Italy - Umbria, Marche, Abruzzo, Latium and Tuscany - both used for the production of countless red DOC and IGT wines. It should however be noticed that in two of these regions it is mainly found just one of the two varieties and almost the absence of the other. In Abruzzo is mainly cultivated the Montepulciano grape - as well as in the neighboring Molise - and Sangiovese is scarcely common; in Tuscany is found the exact opposite condition, with vineyards mainly cultivated with Sangiovese. It is not in fact by chance Montepulciano is mainly associated to Abruzzo as well as Sangiovese to Tuscany, a condition shared - not to be forgotten - with the neighboring Emilia Romagna. Different grapes, Sangiovese and Montepulciano produce quite different wines and not only for reasons associated to the territory.

Sangiovese

Sangiovese directly brings to the mind the red wines for which it is famous Tuscan enology: Chianti, Brunello di Montalcino and Vino Nobile di Montepulciano. In Tuscany Sangiovese is found - alone or blended with other varieties - in most of the red wines produced in the region, including the renowned Morellino di Scansano, name with which it is called Sangiovese grape in the famous town of Maremma. Grape of ancient origins, Sangiovese is among the most common and cultivated varieties in Italy, it is believed it was already used at the times of Etruscans for the production of wines. Sangiovese - like already said - is mainly cultivated in the regions of central Italy, however its presence is also found in Lombardy, Veneto, Sicily, Liguria, Sardinia, Molise, Campania, Apulia and Calabria. Emigrants who left Italy in search of luck in the overseas lands and in Australia, brought with them Sangiovese plants therefore introducing the variety in their destination countries.

Besides Italy, Sangiovese is today cultivated in Australia, California and Argentina, as well as in Corsica, here known with the name of Nielluccio. Variety not so rich in polyphenolic substances, Sangiovese makes wine with a pretty high transparency and an average-strong astringency, it is among the few red berried grapes to be noticed at the taste for the pleasing acidity of its wines. Versatile grape and of many interpretations, of Sangiovese are known two main families taking the name from the size of the berry: Sangiovese Piccolo (Small Sangiovese) - or simply Sangiovese - and Sangiovese Grosso (Big Sangiovese),

the latter being famous for Brunello di Montalcino and Vino Nobile di Montepulciano. Two main varieties giving origin to tens of different biotypes: Sangiovese probably is the red berried grape to count the highest number of clones. In wine making Sangiovese is well suited both to the vinification in inert containers - such as steel and cement - as well as to the fermentation and aging in wood, from barrique to large cask.

Montepulciano

Montepulciano is one of the most common varieties of central Italy, however the highest spreading is found in Abruzzo and in Molise regions. Montepulciano d'Abruzzo is now very famous, today considered - with merit - among the most renowned and representative wines of Italy. Even in Molise Montepulciano is virtually found in all the red wines of the region, representing the most significant variety. Montepulciano is widely known in Marches and it is found in the main *Denominazione d'Origine Controllata* (DOC) e *Garantita* (DOCG) wines of the region, in particular Rosso Conero and Rosso Piceno. The revaluation of Montepulciano grape - a variety having no connection with the homonymous Tuscan town in province of Siena - represents one of the best wine successes in the last years, a process began from the Abruzzo region. In past times Montepulciano was mainly considered as a grape suited to be blended with other varieties, in order to give color and structure to other wines. With time and with facts, Montepulciano is today considered among the most important grapes of Italy.

Wines produced with Montepulciano are characterized by a pretty good intensity of color and a transparency most of the times low. The content in polyphenols in Montepulciano gives its wines an evident astringency, a quality which can be also accentuated by the fermentation and aging in wood, a frequent practice for the wines produced with this grape. There however are good wines produced with the aging in inert containers, proving the good versatility of Montepulciano. With this grape are in fact produced wines with different characteristics and styles,

The Sangiovese and Montepulciano of our comparative tasting

from wines of medium structure to wines of robust body, also supported by an alcohol by volume which can be higher than 13.5%. Thanks to the good content in polyphenolic substances, wines produced with Montepulciano have a good longevity and can age in bottle for many years.

Wines of the Tasting

Grapes different one from each other, Sangiovese and Montepulciano make wines having different styles, differences evident from the simple observation of their aspect in the glass. The first wine of our comparative tasting is Donatella Cinelli Colombini's Brunello di Montalcino Progetto Prime Donne, made from 100% Sangiovese and aged in cask for two years. The second wine is Masciarelli's Montepulciano d'Abruzzo S. Martino Rosso Marina Cvetic produced with 100% Montepulciano and aged for two years in barrique. In both cases, the wines are produced with 100% of the grape subject of our comparative tasting, in order to allow a better understanding of the respective qualities and characteristics. The wines are chosen in function of the vintage currently commercialized by respective producers, served at the temperature of 18°C (65°F) and poured in two ISO tasting glasses.

Appearance Analysis

The differences between Sangiovese and Montepulciano are diverse and evident beginning from what can be observed in the glass. The characteristic determining most of differences in the appearance clearly is the content in coloring substances. As opposed to Montepulciano, Sangiovese has a lower content in coloring substances, a characteristic expressed in its wines with a higher transparency and paler nuances. Both wines show in youth intense and brilliant ruby red colors, sometimes with purple red nuances, although transparency - like already said - is lower in the ones produced with Montepulciano. Moreover, concentration of color and transparency are determined by viticultural factors: in vineyards of low yields, in both cases are obtained deeper colors and lower transparency than the norm. The aging in wood, by means of the slow process of oxidation, gives wines a deeper and more developed color, in particular nuances, where it is possible to watch a garnet red hue.

Let's start the appearance analysis of our wines from Donatella Cinelli Colombini's Brunello di Montalcino Progetto Prime Donne. By keeping the glass tilted over a white surface - a white sheet of paper is enough - at the base can be observed an intense and brilliant ruby red. Transparency of this wine, evaluated by putting an object, or simply a finger, between the glass and the white surface, is not so low and allowing the recognition of the object's details. Let's now pass to the second wine of our comparative tasting: Masciarelli's Montepulciano d'Abruzzo S. Martino Rosso Marina Cvetic. Still keeping the glass tilted over a white surface, let's observe the base, in the point of higher thickness of the wine. Here it can be observed a deep ruby red color, more intense and deeper than the previous wine. Also nuances

- observed at the edge, towards the opening of the glass - show an evident ruby red color. Transparency of Montepulciano is evidently low, clearly lower than the previous wine.

Olfactory Analysis

Both Montepulciano and Sangiovese make wine with intense aromas recalling red and black berried fruits, as well as flowers. The opening of the two wines is however distinct and recognizable: if in Sangiovese it is black cherry, plum and violet to be mainly perceived, in Montepulciano can be mainly recognized plum, blackberry and black cherry. Fermentation and aging in wood of course give both grapes tertiary and complex qualities, including the inevitable aroma of vanilla, as well as tobacco, chocolate, cocoa and cinnamon. To these aromas, in wines produced with Sangiovese and Montepulciano aged in wood for some months, is frequently found the pleasing balsamic touch of menthol. With time and the aging in bottle, fruit aromas evolve in sensations recalling jams and flower aromas - violet and cyclamen in particular - developing the typical character of dried flowers.

The first wine of which we will examine the olfactory profile is Donatella Cinelli Colombini's Brunello di Montalcino Progetto Prime Donne. By holding the glass in vertical position and without swirling, let's proceed with the first smell in order to appreciate opening aromas, that is the aromas of higher volatility. From the glass can be perceived aromas of plum, black cherry and violet, very common in Sangiovese. After having swirled the glass, let's proceed with the second smell which will complete the sequence of aromas with blackberry and blueberry, as well as more complex aromas of vanilla, chocolate, tobacco, licorice, mace and a pleasing balsamic touch of menthol. Let's now pass to the evaluation of Masciarelli's Montepulciano d'Abruzzo S. Martino Rosso Marina Cvetic. The opening of Montepulciano is characterized by plum, blackberry and black cherry, also in this case, very common. The second smell completes the olfactory profile of the wine with the aromas of violet, blueberry, vanilla, licorice, tobacco, chocolate, mace and a pleasing touch of pink pepper. To these aromas is then added leather and the balsamic touch of menthol.

Gustatory Analysis

Differences between Sangiovese and Montepulciano continue to be perceived in the gustatory analysis. Sangiovese has a more crisp and acid character than Montepulciano, which usually is rounder - also because of the effects of alcohol - however keeping a perceivable *sharpness*. Thanks to the aging in wood, as well as the adoption of quality viticultural procedures with low yields, the two grapes are capable of making wines of remarkable body and structure. The aging in wood also gives roundness in both cases: whether in Sangiovese this procedure is useful in balancing the typical acidity of the grape, in Montepulciano it further accentuates roundness while smoothing, at the same time, the astringency of tannins. Grapes having a good content of sugar,

wines produced with Sangiovese and Montepulciano frequently reach pretty high values of alcohol by volume, sometimes higher than 13.5%.

Let's start the tasting from Donatella Cinelli Colombini's Brunello di Montalcino Progetto Prime Donne. The attack of this wine, that is the sensation perceived at the first sip, is characterized by a good astringency of tannins to which is added the fresh acidity of Sangiovese. These sensations reach balance thanks to alcohol and roundness given by the aging in cask, giving harmony to the wine. It should be noticed the correspondence to the nose, in particular the flavors of plum and black cherry. Let's now pass to Masciarelli's Montepulciano d'Abruzzo S. Martino Rosso Marina Cvetic. The attack of the second wine is more astringent than the previous one and, in this case, the sensation of acidity is evidently lower, however it can be appreciated a pleasing roundness. The sensations perceived at the attack are soon replaced by the burning effect of alcohol, bringing the wine in balance. Also in this case the correspondence is very good, in particular with the flavors of plum and blackberry. The structure of both wines is clearly robust, however in Montepulciano will be perceived a fuller body. Finally, let's compare the effects and differences between the aging in barrique and in cask in both wines.

Wines of the Month

Score legend

Prices are to be considered as indicative. Prices may vary according to the country or the shop where wines are bought

Grechetto 2008 Vallantica (Umbria, Italy)

Grapes: Grechetto

Price: € 7.50

Score: ◆◆◆ ★

This Grechetto shows a pale straw yellow color and nuances of greenish yellow, very transparent. The nose denotes intense, clean, pleasing and refined aromas which start with hints of apple, plum and citrus fruits followed by aromas of medlar, hawthorn, pear and hazelnut. The mouth has good correspondence to the nose, a crisp attack and however balanced by alcohol, good body, intense flavors, agreeable. The finish is persistent with flavors of apple, plum and medlar. This Grechetto ages in steel tanks.

Food match: Pasta and risotto with meat and mushrooms, Mushroom soups, Sauteed white meat

Gemine 2007
Vallantica (Umbria, Italy)

Grapes: Merlot (60%), Ciliegiolo (40%)

Price: € 10.80

Score: ♦♦♦★

Gemine shows a deep ruby red color and nuances of garnet red, little transparency. The nose reveals intense, clean, pleasing and refined aromas that start with hints of black cherry, plum and black currant followed by aromas of blueberry, violet, vanilla, tobacco and cocoa. The mouth has good correspondence to the nose, a slightly tannic attack and however balanced by alcohol, good body, intense flavors, pleasing roundness. The finish is persistent with flavors of black cherry, plum and black currant. Gemine ages for 12 months in barrique followed by 3 months of aging in bottle.

Food match: Roasted meat, Braised and stewed meat, Hard cheese

Franciacorta Satèn Brut 2004
Ricci Curbastro (Lombardy, Italy)

Grapes: Chardonnay

Price: € 32.50

Score: ♦♦♦♦

Franciacorta Satèn Brut shows an intense greenish yellow color and nuances of greenish yellow, very transparent, fine and persistent perlage. The nose denotes intense, clean, pleasing and refined aromas which start with hints of bread crust, hawthorn, hazelnut, grapefruit, apple, praline, plum and pear. The mouth has good correspondence to the nose, an effervescent and crisp attack, however balanced by alcohol, good body, intense flavors, agreeable. The finish is persistent with flavors of banana, hazelnut and apple. The base wine ferments in barrique. This Franciacorta Satèn Brut referments in bottle for at least 36 months.

Food match: Aperitifs, Cheese appetizers, Pasta and risotto with fish and crustaceans, Sauteed crustaceans

Franciacorta Extra Brut 2003
Ricci Curbastro (Lombardy, Italy)

Grapes: Chardonnay

Price: € 32.50

Score: ♦♦♦♦★

This Franciacorta Extra Brut shows a brilliant straw yellow color and nuances of straw yellow, very transparent, fine and persistent perlage. The nose reveals intense, clean, pleasing, refined and elegant aromas that start with hints of banana, citrus fruits and bread crust followed by aromas of pineapple, hawthorn, yeast, acacia, pear, hazelnut, praline, plum and butter. The mouth has good correspondence to the nose, an effervescent and crisp attack, however balanced by alcohol, good body, intense flavors, agreeable. The finish is persistent with flavors of banana, citrus fruits, apple and hazelnut. A part of the base wine ferments in barrique. This Franciacorta Extra Brut referments in bottle for at least 42 months.

Food match: Roasted fish, Roasted white meat, Stuffed pasta, Broiled crustaceans

Colli di Faenza Sangiovese 2007
Rontana (Emilia Romagna, Italy)

Grapes: Sangiovese

Price: € 6.80

Score: ◆◆◆

Colli di Faenza Sangiovese shows an intense ruby red color and nuances of garnet red, moderate transparency. The nose denotes intense, clean and pleasing aromas which start with hints of black cherry, plum and violet followed by aromas of blueberry, raspberry and cyclamen. The mouth has good correspondence to the nose, a slightly tannic attack and however balanced by alcohol, good body, intense flavors, pleasing crispness. The finish is persistent with flavors of black cherry, plum and blueberry. Colli di Faenza Sangiovese ages for 12 months in steel tanks followed by 12 months of aging in bottle.

Food match: Stuffed pasta, Broiled meat and barbecue, Sauteed meat, Roasted white meat

Colline Novaresi Vespolina Ricardo della Zoina 2006
Cascina Zoina (Piedmont, Italy)

Grapes: Vespolina

Price: € 10.00

Score: ◆◆◆ ☆

Colline Novaresi Vespolina Ricardo della Zoina shows an intense ruby red color and nuances of garnet red, moderate transparency. The nose denotes intense, clean, pleasing and refined aromas which start with hints of cherry, plum and violet followed by aromas of raspberry, pomegranate, vanilla and chocolate. The mouth has good correspondence to the nose, a slightly tannic

attack and however balanced by alcohol, good body, intense flavors, pleasing crispness. The finish is persistent with flavors of cherry, plum and raspberry. Colline Novaresi Vespolina Ricardo della Zoina ages for 12 months in barrique and for 4 months in steel tanks followed by 12 months of aging in bottle.

Food match: Stuffed pasta, Stewed meat with mushrooms, Broiled meat and barbecue

Ghemme Olegium 2005
Cascina Zoina (Piedmont, Italy)

Grapes: Nebbiolo Spanna (95%), Uva Rara (5%)

Price: € 14.00

Score: ◆◆◆ ☆

Ghemme Olegium shows a brilliant ruby red color and nuances of garnet red, moderate transparency. The nose denotes intense, clean, pleasing and refined aromas which start with hints of cherry, plum and violet followed by aromas of raspberry, strawberry, cinnamon, cocoa and vanilla. The mouth has good correspondence to the nose, a tannic attack and however balanced by alcohol, good body, intense flavors, pleasing crispness. The finish is persistent with flavors of cherry, plum and raspberry. Ghemme Olegium ages for 26 months in cask followed by at least 9 months of aging in bottle.

Food match: Roasted meat, Stewed and braised meat with mushrooms, Hard cheese

Franciacorta Extra Brut EBB 2006
Il Mosnel (Lombardy, Italy)

Grapes: Chardonnay

Price: € 28.00

Score: ◆◆◆ ☆

Franciacorta Extra Brut EBB shows a pale straw yellow color and nuances of greenish yellow, very transparent, fine and persistent perlage. The nose reveals intense, clean, pleasing, refined and elegant aromas that start with hints of banana, bread crust and apple followed by aromas of acacia, yeast, hawthorn, hazelnut, plum, praline, butter and hints of vanilla. The mouth as

good correspondence to the nose, an effervescent and crisp attack, however balanced by alcohol, good body, intense flavors, pleasing roundness. The finish is persistent with flavors of banana, hazelnut and apple. The base wine ferments and ages in barrique for 5 months. Franciacorta Extra Brut EBB referments in bottle for at least 36 months.

Food match: Roasted fish, Roasted white meat, Stuffed pasta, Mushroom soups

Franciacorta Pas Dosé Riserva QdE 2004
Il Mosnel (Lombardy, Italy)

Grapes: Chardonnay (65%), Pinot Noir (20%), Pinot Blanc (15%)

Price: € 36.00

Score: ◆◆◆◆◆

Franciacorta Pas Dosé Riserva QdE shows a brilliant straw yellow color and nuances of greenish yellow, very transparent, fine and persistent perlage. The nose reveals intense, clean, pleasing, refined and elegant aromas which start with hints of banana, apple and bread crust followed by aromas of plum, praline, acacia, hazelnut, grapefruit, yeast, tangerine, broom, hawthorn and butter. The mouth has good correspondence to the nose, an effervescent and crisp attack, however balanced by alcohol, good body, intense flavors, agreeable. The finish is very persistent with flavors of banana, apple, plum and grapefruit. Part of the base wine ages in cask. Franciacorta Pas Dosé Riserva QdE referments in bottle for at least 5 years.

Food match: Roasted fish, Roasted white meat, Stuffed pasta, Broiled crustaceans

Sagrantino di Montefalco Passito 2007
Lungarotti (Umbria, Italy)

Grapes: Sagrantino

Price: € 28.50 - 375ml

Score: ◆◆◆◆◆

This Sagrantino di Montefalco Passito shows a deep ruby red color and nuances of ruby red, little transparency. The nose denotes intense, clean, pleasing and refined aromas which start with

hints of blackberry, black cherry and dried violet followed by aromas of plum, vanilla, tobacco, chocolate, mace and menthol. The mouth has good correspondence to the nose, a sweet and tannic attack, however balanced by alcohol, full body, intense flavors, pleasing roundness. The finish is persistent with flavors of blackberry, black cherry and plum. This Sagrantino di Montefalco Passito ages for 18 months in barrique followed by 15 months of aging in bottle.

Food match: Jam and dried fruit tarts, Piquant cheese

Torgiano Rosso Riserva Rubesco Vigna Monticchio
2005

Lungarotti (Umbria, Italy)

Grapes: Sangiovese (70%), Canaiolo Nero (30%)

Price: € 23.80

Score: ◆◆◆◆★

Torgiano Rosso Riserva Rubesco Vigna Monticchio shows an intense ruby red color and nuances of garnet red, moderate transparency. The nose reveals intense, clean, pleasing, refined and elegant aromas which start with hints of black cherry, plum and violet followed by aromas of blueberry, blackberry, raspberry, vanilla, tobacco, chocolate, cinnamon, mace and menthol. The mouth has good correspondence to the nose, a slightly tannic attack and however balanced by alcohol, good body, intense flavors, agreeable. The finish is persistent with flavors of black cherry, plum and blueberry. Torgiano Rosso Riserva Rubesco Vigna Monticchio ages for 12 months in barrique followed by more than 3 years in bottle.

Food match: Roasted meat, Braised and stewed meat, Hard cheese

Distillates are rated according to DiWineTaste's evaluation method. Please see score legend in the "Wines of the Month" section.

Grappa di Rubizzo
Rocca delle Macie (Tuscany, Italy)
 (Distiller: Distilleria Bonollo)

Raw matter: Pomace of Sangiovese and Merlot

Price: € 17.00 - 50cl

Score: ◆◆◆◆

This grappa is colorless, limpid and crystalline. The nose denotes intense, clean and pleasing aromas of black cherry, blackberry, violet, plum and hazelnut, with almost imperceptible alcohol pungency. In the mouth has intense flavors with perceptible alcohol pungency which tends to dissolve rapidly, good correspondence to the nose, pleasing roundness, balanced sweetness. The finish is persistent with flavors of black cherry, blackberry and plum. This grappa is distilled with a batch steam operated alembic still. Alcohol 42%.
